## KEY PROJECTS

### Bike for us

<https://bike-for-us.herokuapp.com>

- A standard two sided marketplace web application in which users can upload, buy and sell used bicycles with minimal cost.
- Features includes user login authentication by using Devise, payment by using Stripe, quick searching and sorting listing, internal messaging system between users and users with admin as well
- Built on Ruby on Rails framework, postgresql as database, AWS as cloud storage, deployed using Heroku

### Recipes Heaven

<https://recipes-heaven.netlify.app>

- Built during a 36 hours hackerthorn with 3 classmates, this app uses the spoonacular API to find food recipes and nutritions. The user can use natural language to search food recipes, getting ingredients, cooking instructions and nutritions guides.
- Building this app with others helped me to better understand and practise Git Collaboration in a real team environment
- tech used: HTML, CSS, JavaScript, bootstrap
